

WebEOC®

Product Announcement

Version 8.2.0.1

This announcement describes changes made to the WebEOC solution. If you have questions about changes not covered in this document, more information is available on the WebEOC [Client Hub](#) or by contacting your Client Services Manager.

Resolutions

Resolved Data Manager Errors

When using WebEOC 8.2.0.1, imports of data occur appropriately and fields populate as expected when tables are chosen from the **Table Name** drop-down list.

Additionally, the issue has been resolved that was causing data imports to fail when creating lists.

Enabled Header Sorting Across Web Browsers

Sortable headers are now working for view links with “window” as the target. This functionality is operable no matter which Web browser you use.

Resolved Issue Involving Display of Process Permissions Options

Process Permissions options are now shown appropriately if you select **positionname** when creating a view filter.

Enabled Display of Create Record Viewlink

The **Create Record** viewlink in the *Comments* section now displays when you view an existing record within the default Resource Request/Task Assignments board.

Similar issues with board permissions tags in other boards have also been resolved.

Fixed Presentation of Aggregate Expressions

Aggregate expressions are presented appropriately in Master views, now showing the correct values.
