

WebEOC®

Product Announcement

Version 8.3.1.1

This announcement describes changes made to the WebEOC solution. If you have questions about changes not covered in this document, more information is available on the WebEOC [Client Hub](#) or by contacting your Client Services Manager.

Added Icons for Multi-polygon Features

An icon now appears on the map when importing multi-polygon data. When a multi-polygon is rendered on a map, the icon specified for the feature is centered on the largest polygon, by area size, contained in the single feature.

Eliminated Extra Whitespace when Saving the Design View

When editing a board's view using the Design View editor, saving the view multiple times no longer results in large blocks of whitespace within the board code.

Re-introduced the % Wildcard Filter

As seen in previous versions of WebEOC, administrators can once again use % as a wildcard filter when selecting positions to add in the User Manager of the *Admin* window.

Resolved Issue Causing Individual Incident Activity Report to Fail

The issue causing the Individual Incident Activity Report to fail upon generation has been resolved.

Fixed Intermittent Dashboard Issues

The problem causing intermittent issues with saving a dashboard upon updating has been resolved so that users can consistently edit dashboards and see the expected results of such changes.

Eliminated Duplicate Globalids when using the Static Option

Board tables populated at incident creation via static data from the **Setup** incident no longer have the original **globalid** value copied from the **Setup** entry record into the new record. This eliminates any confusion regarding which record to update in the future.

Corrected Item Duplication Issue

If using a process permission to populate a `<select>` on an input view, the item from the list that was saved for the record is no longer duplicated.

Resolved Subscription Board Status Subscriber Error

An error is no longer triggered when an administrator attempts to view subsequent pages in the list of subscription board statuses.

Resolved Localization Issues

Several issues were resolved that related to localizing WebEOC to other languages.
