WebEOC® Air and Cruise Module
Product Announcement

Version 1.1.1

This announcement describes changes made to the WebEOC *Air and Cruise Module* add-on. If you have questions about changes not covered in this document, more information is available on the WebEOC Client Hub or by contacting your Client Services Manager.

New Family Member Information Report

A new Family Member Information Report can now be generated in the *Air and Cruise Module*. This report, required by many Airlines and similar organizations, exports information regarding a passenger's name, address, nationality, family member contacts, and more.

Enabled Automatic Population of Passenger Family Member Notified Fields

As in the module's predecessor, the *Passenger Data* add-on, the **Notified Date/Time** and **Notified By** fields within the **Family Member** tabs now automatically populate when the **Notified** check box is selected, speeding up the creation of family members and providing instantaneous, accurate reporting of this field data.

Added Option for Three Itinerary Flight Segments

To save time, you now have the ability to add up to three flight segments per travel itinerary record. In allowing more flight segments, you no longer have to create additional records for multiple segments, re-entering the same shared information for each entry.

Added Record Locator Field to Travel Itinerary

A new **Record Locator** field has been added to the travel itinerary, helping you maintain correct and differentiable information for each travel itinerary record.

Included Version Number

Air and Cruise Module now includes a Version view that specifies the current version of the *Air and Cruise Module* being used. This information helps you quickly and readily identify which version of the board you have installed.

Fixed Issues Preventing Users from Creating Family Members

Users and administrators alike can now successfully add family members to the module from the *Add Family Member* page.

Separated First and Last Name for Passenger Searches

You can now search for a passenger by first and last name separately, improving the passenger search functionality.

New Air_Country List

Rather than referencing the same list for the passenger country and nationality fields, a new AIR_Country list has been added, allowing list items to be modified as needed to correspond with associated country or nationality fields.

Resolved Crew Type Count Issue

Number of Crew is now updated under **Summary**, on the *Passenger List* page, when **Crew** is selected for **Passenger Type**.

Refined Presentation of Dates

The "**T**" seen in various date fields for some users has been removed, presenting an accurate and easy-to-read date timestamp.
