

EMResource® 3.59 Release Notes

These notes describe highlights of the EMResource 3.59 release scheduled for Wednesday, October 6, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Bulk User Maintenance

The new Bulk User Management feature allows administrators to update multiple user accounts at the same time with options to append (add to) or overwrite permissions in these sections.

- Authentication Provider
- Deactivate
- Roles
- Resource Rights
- Event Notification Preferences
- Status Change Notification Preferences
- Regions

Regional Administration

Administrators are now able to view a list of the regions to which a user belongs and, if necessary, add them to other regions.

Delegated User Managers

Delegated User Managers can now create and update other Delegated User Managers in their facility, allowing you to better distribute user maintenance tasks.

Calculated Status Types

Calculated Status Types now support multiplication and division statements for enhanced reporting in views.

Audit History

Now, information about user account updates is captured in the Audit History. This information will be available for your review in an upcoming EMResource release. Updates to the following sections are included in the history.

- Roles and Profiles
- Resource Rights

- Notification Addresses

More information about user account updates will be added to an administrative report in the future.

Resolutions

- An issue that occurred when API updates unexpectedly removed comments has been resolved.
- An issue that incorrectly converted numbers in the Bulk Data Upload file has been resolved.

Discontinued

Juvare is constantly evaluating, enhancing, and adding new features. Occasionally, we also need to discontinue or remove a feature. In the EMResource 3.59 release, we are removing two features:

- Shared Accounts with Personal Logins is being removed to strengthen user management security and support our transition to Juvare Login Services. All Personal Logins will be converted into regular accounts with the inherited permissions.
- Refined View Rights is being removed to simplify the assignment of user permission. Users with the refined rights will be granted access to view the entire resource.
