**PRODUCT ANNOUNCEMENT**

EMResource®

Version 3.30.1

This document highlights important release changes to your system. If you have questions about changes not covered in this document, contact your Client Services Manager. Further information can be found in the Online Help.

Correction

Added Ability to Edit the Region Default View

As of release 3.30, users who have the Setup Region Views right can edit the *Region Default* view just as they would any other region to which they have access.

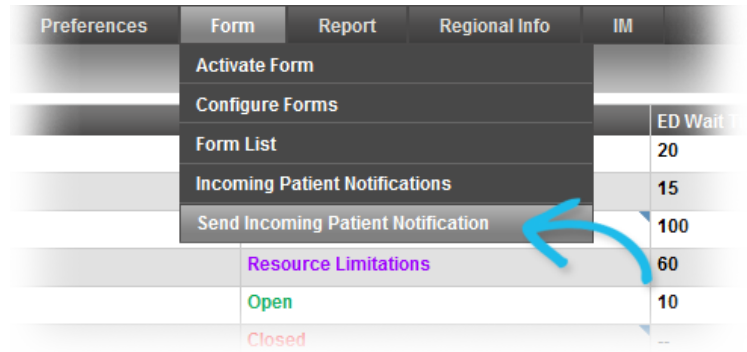

This feature was unintentionally left out of the product announcement for release 3.30.

Administrators

Renamed Incoming Patient Notification Menu Option

The **Add Incoming Patient Notification** option
you select from the **Form** menu to create and
send this type of notification has been renamed
to **Send Incoming Patient Notification**.

Users

Added Sort Option to Create View Process

The **Advanced** tab of the *Create View* process enables you to specify whether resources should be sorted
by **Name**, **Status**, or a **Custom** sort order.

If you choose **Name**, you now have the option to specify **Ascending** or **Descending** order.

In addition, **Ascending** and
Descending options are available if you
choose **Status** in the **Sort Resources**
column and the status supports this
type of sorting; for example, the status
contains numeric values that can
logically be sorted in this fashion.

The **Ascending** and **Descending** options are available for all status types except Multi.

Improved Introductory Text for Create View Tabs

Introductory text at the top of each tab in the *Create View* process has been improved to better indicate
the actions you can take in that tab.
