

EMTrack® 5.0 Release Notes

These notes describe enhancements introduced in the EMTrack 5.0 release on Tuesday, December 29, 2020. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Medication Component

Patient forms were extended to offer the Administered Code (CVX) and the Substance Manufacturer Code (MVX) components. When included on patient forms, these codes and the new vaccine check box are available to clinicians and responders that enter medication details.

Health Insurance Identification

Patient forms were extended to include health insurance details, such as the Insurance Plan ID and Insurance Company ID. When included on patient forms, these fields allow clinicians and responders to enter the patient's insurance identification information.

Resolutions

Resolved minor issues related to usability and navigation.

Vaccination Module

The Vaccination Module is a licensed premium module in EMTrack that is used to manage the COVID-19 immunization initiative for multiple clients. It allows you to effectively manage vaccination events with features that include event creation, scheduling, registration, ticketing, and intake. For more information, see the [Mass Testing and Vaccination](#) page on our website or contact your Client Success Manager (CSM).

This release included development work necessary to integrate with:

- The pre-registration platform
- Immunization registries through Health Links 7 (HL7)
- Juvare's Ad-Hoc Notifications Plug-In
