EMTrack® 5.10 Release Notes

These notes describe enhancements introduced in the EMTrack 5.10 release scheduled for Wednesday, October 13, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Patient's Relatives

On Web and Mobile "add" forms, now you can enter and update information about a patient's relatives. On the Web forms, you can also delete information about existing relatives.

Juvare Events API

The Juvare Events API for EMTrack has been expanded to increase the number of patient form fields that can be automatically populated. Now, form fields such as Occupation, Relatives, Insurance, and Housing Type can be paired with custom questions in Juvare Events so that the information entered in Juvare Events is immediately available on your patient form.

Resolutions

An issue that prevented you from saving information about a patient's relatives when using the EMTrack Mobile app has been resolved. Now, you can add, save, and retrieve information about relatives entered through the Mobile "add" form.
