

EMTrack® 5.5 Release Notes

These notes describe enhancements introduced in the EMTrack 5.5 release scheduled for Wednesday, April 14, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or support@juvare.com.

Juvare Events Integration

When using EMTrack to scan the QR Code on a ticket, the Juvare Events integration now retrieves answers to screening and prescreening questions. Retrieving this information, in addition to the name and date of birth, allows check-in personnel to verify and update the status of patients more quickly.

EMSupply Integration

Enhancements to the medication properties were implemented for the EMSupply integration. For example, in EMSupply you can now enter default medication properties, such as route and site, and these values will appear as the defaults for Medication Administration questions on EMTrack patient forms.

Filtering

Two new filter features were added on the Filters tab. One allows you to identify patients by dose number (for example, find all patients that have received the first dose of a specific vaccine). The other allows you to filter any date/time field by the current day (for example, find all patients that were encountered today). These, like all other filter features, can be leveraged in any dashboard gadget.

Resolutions

The timestamp on Medication Administered and Procedures Administered entries was defaulting to the time entered for the previous patient record. Now, it defaults to the current date and time as expected.

Enhancements

Various usability and performance enhancements were enacted.
