

## EMTrack® 5.6 Release Notes

These notes describe enhancements introduced in the EMTrack 5.6 release scheduled for Thursday, April 22, 2021. More information is available through your solution or by contacting the Juvare Support Center at 877-771-0911 or [support@juvare.com](mailto:support@juvare.com).

### Access to Immunization History

Authorized users can view a patient's immunization history, which is retrieved on demand from the state immunization registry. Access to the immunization history is restricted and logged for compliance with the Health Insurance Portability and Accountability Act (HIPAA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act.

### Medication/Vaccination Ordered Field

Now, administrators can choose to make the Medication/Vaccination Ordered field on patient forms a list of predefined options (for example, at vaccination clinics) or a free-text option (for example, in emergency medical situations).

### Default Location and Role in User Administration

On the user list in System Settings, in addition to other information, you can now view users' default location and role. This new information helps you to quickly sort and filter people accordingly.

### Provider Facility Forms

When editing a provider facility through System Settings, you can now review a list of patient forms available to the facility and choose to enable or disable optional forms. Some forms that are shared with all facilities by default cannot be disabled.

### Maiden Name

Now, administrators can choose to include Maiden Name and/or Mother's Maiden Name fields in the name component on patient forms.
